

**Your company could be losing both time and money locating lost and missing Tracer Wire's**

**Keep those dollars in your company - with our simple solution below!**

As our population grows and natural gas consumption increases, home sales are rising along with remodels and backyard upgrades increasing -many are adding heated pools, outdoor gas kitchens and heated hot tubs! Planning is important and utilities lines in many areas are buried plastic and the "Call before you dig" is a mandated and very important.

USA gas companies have found that requests for "service locates"-approximately 20% of gas customer users, are required on a yearly basis. A survey of major gas distribution companies determined that 50% of required locates tracer wires will be "missing" when the company employee arrives. Digging is usually required and most companies require a second employee assisting in the search. Locating a missing service wire for the gas meter will consume an average of 45 minutes plus two workers, a costly non-billable company service call! All gas companies lose **time** and **money** searching for lost gas service lines when tracer wires are missing! that "Lost-Non-Recoverable Money" could be saved and added to the company bottom line!
